Summary

Detail-oriented Software Engineering graduate with practical experience in manual testing concepts, STLC, defect life cycle management, and API testing using Postman through automation and data engineering projects. Demonstrated ability to create and execute test cases, perform bug reporting and defect tracking, and ensure product quality throughout the SDLC.

Skills

Programming & Querying: SQL, Python, C

Testing tools: Automation Testing, Selenium, Web driver, Manual Testing, Jira

Data Visualization Tools: MS Excel, Power BI

Tools: Git, GitHub,UIPath, JN, MySQL, MS Office,

Projects

Airbnb Data Engineering Pipeline (Link) | *Snowflake, dbt, AWS, Python*

- Built a scalable Medallion Architecture pipeline (Bronze → Silver → Gold) to process Airbnb listings, bookings, and hosts data from AWS S3 into Snowflake, ensuring structured and analytics-ready datasets.
- Implemented dbt transformations including incremental models and SCD Type 2 snapshots, while designing fact tables and One-Big-Table (OBT) models with lineage tracking, testing, and dependency management.
- Optimized data pipelines using Snowflake warehousing, clustering, and ephemeral models while enforcing data quality checks (unique, not-null, referential integrity, business rules) for efficient and trustworthy analytics.

OpenCart Manual QA Testing (Link) | *Manual Testing, STLC, Jira/SmartBear*

- Executed end-to-end manual testing of the OpenCart e-commerce application, covering the full STLC — from requirement analysis and test scenario design to test case execution, defect logging, retesting, and test sign-off.
- Designed 8 test scenarios spanning 175+ detailed test cases across Registration, Login, Logout, Search, Product Display, and Add-to-Cart modules, tracking execution status and pass/fail results in SmartBear (Jira Test Management).
- Identified and reported 23 defects with detailed reproduction steps, expected vs. actual results, and severity classification (Critical, Major, Minor), driving fixes through retesting and regression cycles.

Docent: Context-Aware AI Document Assistant (Link) | *Next.js, FastAPI, LangChain, ChromaDB, Docker*

- Designed and developed a full-stack RAG document assistant in 7 days using AI-assisted development, letting users upload PDF/Markdown files and get answers grounded only in that document, with clickable inline citations that jump to the exact source page or heading.
- Built the retrieval pipeline (text extraction → LangChain chunking → embeddings → ChromaDB) with page/heading metadata on every chunk, streaming answers over SSE, and a fallback that skips the LLM when nothing relevant is retrieved to prevent hallucination, with swappable OpenAI, Anthropic, and Gemini providers.
- Implemented a secure FastAPI backend (10+ REST endpoints) with bcrypt/JWT and Google OAuth authentication, per-user data isolation, prompt-injection-resistant prompts, and sanitized uploads, then containerized the frontend, backend, and ChromaDB as 3 Docker Compose services and deployed the demo on Render.

Education

B.E. Information Science & Engineering

P.E.S. College of Engineering, Mandya

Graduated: 2025

CGPA: 7.8 / 10

Diploma. Computer Science & Engineering

Government Polytechnic College, Ramanagara

Graduated: 2021

CGPA: 8 / 10

Certifications

NPTEL Certifications
